DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Griffith, U.S./4,786,608.

Griffith discloses a method for forming a semiconductor device, which comprises implanting ions (i.e., silicon ions, fig. 2) at a dose (Re claim 3, i.e., 1E15-1E16, see col. 3, line 10) and an energy (Re claim 2: i.e., 120-140 KeV, see col. 4, lines 34-37) into SOI material containing top silicon layer 14 and buried oxide layer 13 at a temperature below 100 oC (i.e., room temperature, see col. 4, lines 54-55), to form an amorphous region 22 including said buried oxide layer (note: the amorphous region 22 is at least including the top surface of the buried oxide layer) and to keep the original structure in vicinity of the major surface (fig. 2 and col. 4, lines 28-55, also see abstract and summary sections); annealing the SOI material at a temperature in the range from 900 to 1250 oC (i.e., 1150-1250 oC, see col. 4, lines 56-60) to restore structure of the top silicon layer 14 and the substrate 15 and inherently shows eliminating silicon islands and pinholes in said buried oxide layer since the same process is carried out, see figs. 1-4; cols. 1-8 for more detail.

Response to Arguments

3. Applicant's arguments filed August 8, 2005 have been fully considered but they are not persuasive.

Applicant argues that the prior art does not show implanting ion on the SOI material. The Examiner respectfully disagrees because fig. 1 shows the SOI material containing a top silicon layer 14 having a major surface, a buried oxide layer 13 and a substrate 15, and fig. 2 shows implanting ion on the SOI material.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
